

about the company

DayCo Manufacturing began operations over 30 years ago in Detroit, Michigan under the name, M.J. Day Machine Tool, Inc. In 2007, the company expanded operations to North Carolina and began operating under the name DayCo Manufacturing, Inc.

DayCo is a full service machining source capable of most all manufacturing needs from CNC and manual machining to wire EDM,

welding, grinding and fabricating. Over the years, DayCo's continual quest for quality and customer satisfaction has led to attaining ISO9001, AS-9100 Rev. B certification. Not only has this quality system helped in reducing cost and increasing quality, but also gives customers a sense of assurance that their jobs will be completed on time and right the first time. DayCo is proud of the reputation it has earned over the years and always welcomes the opportunity to extend this experience to new customers.

“DayCo is a full service machining source capable of most all manufacturing needs from CNC and manual machining to wire EDM, welding, grinding and fabricating.”

our services

Our services include:

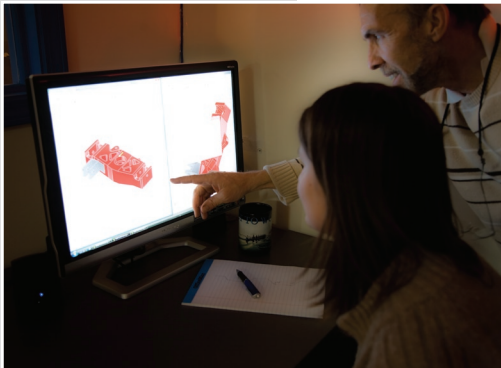

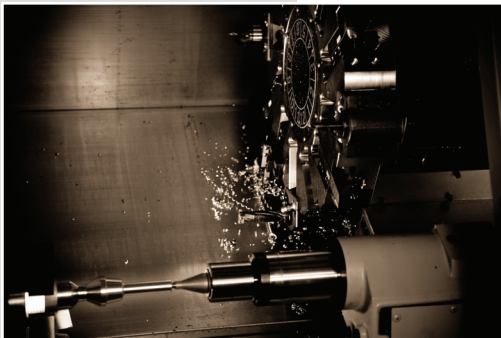

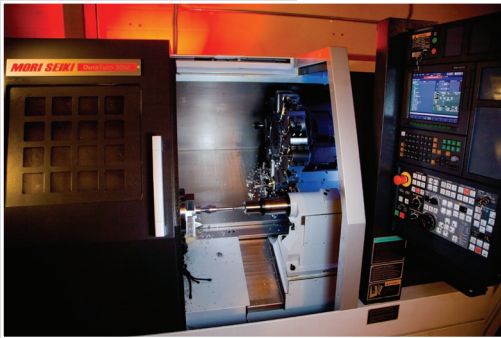

- CNC Milling
- CNC Turning
- Wire EDM
- CAD/CAM Design and Mfg.
- Welding
- Grinding
- Assembly

DayCo's approved vendor list includes companies approved for services including: welding, heat treating, anodizing, passivating, cad plating, and many other steel and alloy finishing processes.

Certified: AS-9100 Rev. B | ISO 9001:2000

machining capabilities

CNC Milling/Turning

The bulk of the work performed at Dayco is CNC milling and turning. Our qualified staff has an average of 15 years experience machining parts. We specialized in prototype and short run production parts. Investing in state of the art machines from companies such as FADAL and MORI SEIKI assures the capability to manufacture precision parts maintaining today's tough industry standards, plus, the repeatability for multiple parts.

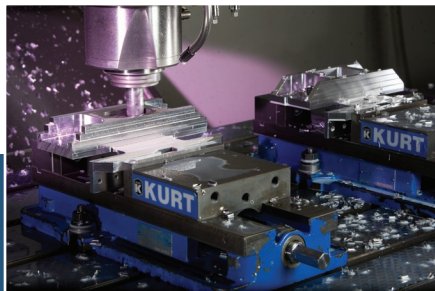

CAD/CAM

To assist in our manufacturing processes, DayCo uses surfcam CAD/CAM system. Investing in the most recent versions of surfcam velocity allows DayCo to continually improve on manufacturing processes and cycle times while maintaining the highest level of quality. Offline part verification through surfcam ensures part accuracy the first time and reduces scrap.

Other benefits include the ability to work directly from solid models and wireframes, giving DayCo the means to work directly from customer CAD data.

quality

A full line of inspection equipment including a CMM assures part accuracy. All parts are subjected to not only in process, but final inspections and first article inspection reports are supplied upon request. DayCo Manufacturing is ISO 9001 Certified.
